GUIDE
Cultured
Marble

Use a good glass cleaner, furniture polish or foam to clean and polish cultured marble surfaces. Use of abrasive cleaners will void the warranty. Tap water temperature in tubs or lavatories should be adjusted to avoid extremes. Repeated exposure to extreme temperatures will void the warranty. Many items normally used in the bathroom, such as dyes and chemicals, hair care products, nail polish, polish removers, and perfumes are potential hazards; spills should be wiped up immediately.

Never place a lighted cigarette on the edge of your sink. It will leave a burn mark that will need to be removed professionally. This type of abuse is not covered by warranty.

Inspect all caulk joints every few months to insure no gaps have appeared. If caulk joints have separated, re-caulk using a 100% silicone caulk and allow to dry thoroughly before use.

Proper care and maintenance will provide years of function and beauty to your very durable cultured marble and cultured granite products.
